- Create a library named "HW4" that points to the same location you store any SAS files for this assignment.

- The following plain text files need to be combined into a single data set

  - AO Division.dat
  - CORP Division.dat
  - EmpData.dat
  - FINANCE_IT Division.dat
  - FLIGHT OPS Division.dat
  - HR Division.dat
  - Personal.dat
  - SALES Division.dat

- Create a single data set in SAS using the Division files and name it DIVISION.

- Use the now-combined division data and combine it with EmpData and Personal to create the complete data set and name it Air_Emps_Full.

- Ensure the Air_Emps_Full data set does not include the PHONE variable and update the salary variable to be named CurrentSalary. Include an appropriate format for this variable.

- Use the Air_Emps_Full data set to create a subset of data that only includes records for employees that were hired prior to 1990 and whose current salary is below $45,000. Name this data set Air_Emps_Underpaid.

  - Hint: There is an easy way and a hard way to do this. To do it the easy way, you may want to use a **date literal** such as '06OCT2016'd in your program. (Date literals are not case sensitive.)

- Ensure both data sets include appropriate labels for all variables.
